

BACTOCIDE 1

WHAT IS BACTOCIDE 1?

Bactocide 1 is an effective combination of compounds known to anti protozoan, fungal and bacterial activity for use with ornamental fish. These compounds work synergistically yielding fast and strong results against bacterial, protozoan and fungal caused diseases, while being very gentle on the fish. The fish easily absorb Bactocide 1, making it very effective for both external and internal diseases.

WHAT ARE THE INDICATIONS OF USE OF BACTOCIDE 1?

Effective in preventing and treating discus black disease (plague), skin ulcer, cloudy eyes, columnaris, red sores, bacterial gill disease, fin rot, huddled fish near the corner or back of aquarium, fish not eating with or without white stringy poop.

METHOD OF USE

Use one level measure of the included spoon (1 gram) for every 10 gallons (40 liters) of aquarium water. Leave it for 48 hours then change 25-100% of the water and repeat the treatment. It is preferable to mix the powder well with some aquarium water in an external container then distribute it evenly over the water or pour it in a high flow area (ex: pump return). Prior to the treatment, clean the filter and aquarium and maintain the filtration and aeration.

We advise to add 1g/L salt along with Bactocide 1 when used during quarantine process for new fish.

Repeat the treatment for a total of three times. Extend the treatment up to 10 days in case of severe infections. Do not stop the treatment on the first signs of recovery to avoid reinfection, continue the treatment to at least six days.

PRECAUTION

Store in a cool dry place, away from children reach. For use on ornamental fish only, not intended for use on fish for human consumption. Bactocide will have an impact on the bio-filter, therefore; it is preferable to use it in a hospital tank instead, except if you are dealing with a plague then the treatment should be in the main tank for all fish with filters running. All tools, nets and hoses should be disinfected. Well-established filters will not lose all its capacity.

INGREDIENTS

Usnea lichen extract, Terminalia catappa extract, Gingerols, Echinacea pupurea extract, proprietary phytochemical compounds.
